Requesting Authority to Access – AM I READY?
Quick reference guide

⚠️ **Before raising a request for an Access Permit, known in Permitted as a TAP (Transurban Access Permit), use this checklist to confirm you have all necessary information to complete the application.**

As a guide, a TAP request should be <u>submitted</u> at least 10 days prior to the commencement date of the works (including where a TAP is re-submitted).

For support reach out to your Transurban Site Contact.

NOTE - This quick reference guide is for information only. It should only be used as a guide and should not be relied upon.

☐	**Works have been planned and approved.**	Applications for TAP and Traffic Closures can commence, however an Access Permit is for access only, and the TAP cannot be fully submitted until the works or activity have been planned and approved (planning and scheduling).
☐	**Hazard Register has been reviewed.**	Hazard Registers relevant for each site are available from the "Site Downloads" section of Permitted (look for the ? Icon in the top right corner of screen).
☐	**Authority to Access Permit General Conditions reviewed and communicated**	Terms and Conditions are available from the "Site Downloads" section of Permitted (look for the ? Icon in the top right corner of screen) and should be communicated to relevant sub-contractors.
☐	**SWMS developed and reviewed (tailored where necessary)**	SWMS, including those of subcontractors, have been developed and reviewed for the specific scope of work and are tailored where necessary to address the works being performed. SWMS have been prepared for all high-risk work, meet all legislative requirements and comply with your Company's WHSE management systems.
☐	**Works have been packaged according to the Work Packaging guidelines.**	A Work Package is a standardised structure and provides a framework for the works that should go into a single TAP. The framework is available in Appendix 1 of the *Authority to Access (ATA) Contractor Procedure*.
☐	**Where CSP has been requested** - CSP (Critical System Permit) documented and approved by all relevant Subject Matter Experts.	A Transurban representative will let you know whether a CSP is required. A CSP will be requested where the works are high-risk and/or complex and impact, or have the potential to impact, the functionality of systems critical to minimum operating requirements. A template is available which provides a guide to the documentation required (reach out to your Transurban Contact).
☐	**Where Traffic Management is required: -** • TMP, TGS and/or SWMS documented and reviewed • Checked whether state-based road closure approvals will be required and the appropriate turnaround time.	• Have traffic documentation available at hand, it will be attached to a Traffic Closure request. • State-based road closure approvals require a longer turn around time (could be up to 8 weeks depending on the location). Noting the Traffic Closure Request can be submitted without the approval being attached (it can be uploaded later).

⚠️ **The mandatory requirements a TAP must contain:**
- The Work Package type
- The scope of work being performed (including inspections)
- Where the work will be conducted
- The date(s) and time(s) required
- Whether CSP and/or Traffic Management is required, along with associated information
- All individual(s) that will be attending site.

Access Permits will be reviewed to determine if the request to access site is accepted and all information provided is sufficient.

ℹ️ **Tip**
TAPs can be duplicated from a previously created one, by anyone from the same organisation with "view" access to the Access Permit.

Navigate to the TAP to be duplicated and select the "Create from TAP" option in the green arrow drop-down menu. You'll just need to select the new dates and modify any other details to be changed.

🛠️ **Support**

Queries around the type of work, hazards, locations, dates/times can be raised with your Transurban Site Contact.

Queries around issues with Permitted adding attendees, additional sites) are managed by the Transurban Technology Service Desk.

Phone: 1300 166 214

Remember
Where a CSP (Critical System Permit) is required, it MUST be submitted, reviewed and accepted (or cancelled) prior to the Risk Assessment being available for completion (a notification will be sent to the Requester when the form becomes available) .

Create a TAP
Any individual with verified qualifications can create a TAP but this should only be completed by someone from the organisation directly contracted by Transurban to complete the works. The exception to this is NCE (non-contracted entities) who are entering site to perform works on equipment or assets located within a Transurban Asset.

1. Select **Create > Create TAP**. Then select the Site (All sites linked to your company will be displayed)
   - The icons under the site required should be all green. If you can't procced after selecting the site, hover over the red icons to understand what activities need to be addressed to create a TAP.

2. Complete the **Initial Questionnaire** including selecting the site zone, work package type, scope of works, disciplines, work identification numbers, date and time of access, works location, site contact, if keys and/or radios are required, and if Traffic Management and/or CSP is required.
   - The scope of works should include a summary of what works will be taking place, summary of work methods, equipment being bought onto site and planned entry and exit points.
   - The Asset you are working on may have a method other than Permitted for requesting keys and/or radios, if this is the case select "No" for these fields.
   - The work identification numbers, dates and times, and work locations selected in this questionnaire will appear on Traffic Closure and CSP questionnaires later in the TAP. Ensure the dates selected also cover these activities.

3. Select "**Yes, submit for next steps**" and click on "**Save**".
   - If the Initial Questionnaires is "Saved as Draft", you can return to it to finalise before submitting for next steps.
   - The Initial Questionnaire must be submitted for next steps before the Risk Assessment can be completed.

4. Where Traffic Closure and/or CSP was selected, these questionnaires will display next. For details on how to complete these questionnaires see Complete and Submit Traffic Closure and/or Complete and Submit CSP (Critical Systems Permit).

5. Complete the **Risk Assessment** questionnaire and answer all validation questions. Click on "**Next**".

6. Attach relevant **SWMS** and click on "**Next**".

7. Read and "**Accept**" the **Warrant Statement** and click on "**Submit**".

8. You will receive an email confirming the submission of the TAP.

9. The TAP is sent to your Site Contact (or representative) to perform an Initial Risk Check. The TAP will either be "Accepted" and issued, or escalated for a Detailed Risk Check.

10. Once the Initial Risk Check, and if escalated the Detailed Risk Check, are in an "Accepted" status your TAP will be "Site Ready" and workers can then attend site at the TAP start date to perform the activities as per the scope.

11. From the TAP click on the green arrow and select **Manage Attendees**. Select Attendees who will be attending site using this TAP (can be performed any time until the TAP is in a "Completed" status).

Traffic Closures can be submitted, reviewed and accepted prior to the TAP being submitted.

Submit a Traffic Closure

On the Initial Questionnaire "Is Traffic Management Required?" must have a response of "Yes – Delivering Closure" or the Traffic Management questionnaire to be triggered; the response "Yes - Utilising Existing Closure" will trigger a review, but not the questionnaire.

1. There are two options to navigate to the Traffic Management screen: -
   a) The Traffic Management displays after the Initial Questionnaire is submitted.
   b) From the TAP screen scroll down to Traffic Closures and click on the Manage Traffic Closure button.
2. Click on the **Add Traffic Closures** button.
3. Complete the **Traffic Closures form** including closure title, closure type, TGS/TMP/ SWMS attachments, start and end time of the closure, company performing traffic management, location of the closure, major events and indication if state-based closure approvals will be required.
   - Traffic Management Plans (TMP) and Traffic Guidance Schemes (TGS) attachments require the name of the person who created the document and their registration number.
   - Proof of state-based traffic closures are not required to submit the traffic closure but must be attached to the Accepted traffic closure before the traffic management can be implemented.
   - Applications for state-based traffic closure approvals are completed by either the Requester or Transurban depending on the scenario and Asset. Reach out to your Transurban Site Contact for confirmation.
4. Select "**Yes, submit for review**" and click on "**Save**".
   - A review will be sent to the Transurban team, if further information is required the reviewer will reach out to you.
5. The Traffic Management screen will again be displayed. If more Traffic Closures are to be requested repeat steps 2 – 4.
6. Click on "Done". You will be returned to the TAP or if the TAP has not yet been submitted to the next stage in the application.

Updating Traffic Closures

Traffic Closures can be added, updated or cancelled at any stage of a TAP lifecycle between the Initial Questionnaire submission through to the TAP being in a "Completed" status (end date of TAP has passed).

As soon as Traffic Closure is submitted, or re-submitted, a review will be triggered independently of the TAP reviews (CSP/ Initial/ WHS/ Environment) and any other Traffic Closures.

TAP - Manage Traffic Closures button – click to open Traffic Management workflow

Traffic Management Screen– click Add Traffic Closure to open a Traffic Closure request form

⚠ **State-based Traffic Closure Approvals must be attached using the "replace" function to avoid a re-review of the Traffic Closure request.**
1. Navigate to the Traffic Closure and scroll to the field "Attach copies of your.."
2. Click the upload symbol.
3. Select the document to be uploaded.
4. Click on the green tick to confirm the upload
   - Note – only one document can be uploaded to this field. Multiple documents must be combined into one before uploading.

A Transurban representative will let you know when a CSP is required, usually during the planning and scheduling phase of the works.

> ⚠️ **Documentation for a CSP should be prepared in conjunction with, and approved by, Transurban critical system subject matter experts BEFORE the CSP request is created in Permitted.**

Submit a CSP (Critical Systems Permit)

On the Initial Questionnaire "Do any of the activities within this work package take offline, or potentially materially impact, the intended function of a critical system? (Critical Systems Permit required)" must have a response of "Yes" for the CSP workflow to be triggered.

1. There are two options to navigate to the CSP screen: -
   a) The CSP Questionnaire displays after the Initial Questionnaire is submitted, and if required after the Traffic Closures have been submitted.
   b) From the TAP screen scroll down to **Critical Systems Permit** and click on the green arrow to display **"Do Critical System Permit".**
2. Complete the **CSP form** including description of the works, select systems being impacted, date and time systems offline/ impacted, location/s of the works, document approvers, specify if environmental approval has been granted, and upload all documents associated with the CSP.
3. Select "**Yes, submit for review**" and click on "**Save**".
   • A review will be sent to the Transurban team; if further information is required the reviewer will reach out to you.
