

Requesting Authority to Access

Quick reference guide

Raising an Authority to Access request through Permitted is for access only. Works should be planned and approved before the access permit process begins.

Authority to Access requests (WAPs*) are required every time you need to access any portion of the site.

The mandatory requirements for an Authority to Access Request (ATA) must contain:

- The scope of work being performed (including inspections)
- Where the work will be conducted
- The date and time required
- All individual(s) that will be attending site.

Authority to Access requests (WAPs*) will be reviewed to determine if the request to access site is valid and all information provided is sufficient.

 **Tip**
Once you've created your first ATA, you can duplicate a new ATA from a previously approved one.

Navigate into your approved ATA and select the "More" option and then "Create from WAP". This will then copy all your details across (Scope of work, locations, attendees, attached documents and risk identification questions). You'll just need to select the new dates and modify any details if they've changed.

Support

Queries around the type of work, hazards, locations, dates/times can be raised with your Site Contact.

Queries around issues with Permitted (logging in, adding attendees, additional sites) are managed by the Transurban Service Desk.

Phone: 1300 166 214 **Email:** TechnologyServiceDesk@transurban.com

Request an Authority to Access

Any individual with verified qualifications can create an Authority to Access (ATA) request.

1. Select Create > Create WAP. Then select the Site (All sites linked to your company will be displayed)
 - The icons under the site required should be all green. If you can't proceed after selecting the site, hover over the red icons to understand what activities need to be addressed in order to create an ATA.
2. Select the zone from the "Select Zone" drop down list.
3. Enter a description of the purpose of the access in the "Scope of Works" field. On the first line, provide a summary about what the works entail. Continue to provide more detailed information about what the works are for and where you'll need access to. Ensure you include a prompt in the Scope of Works Section as a reminder to contact the Traffic Control Room prior to commencement and upon completion of works.
4. Select all the dates access is required for from the "Select Dates" calendar. Select the site arrival and finish time for each date and select next. Please contact the Transurban Service Desk if the dates/times you need are not shown.
5. Search for attendees who will also need access as part of this ATA request (additional attendees can be added to an ATA at a later stage)
6. Search and add all required locations you'll need to access. Search for locations using terms like 'Mainline', 'Ramp', 'Tolling', 'VMS' etc. or select from your recently used locations below. Once all required locations have been added, scroll to the bottom and select next. (Refer to page 2 - 4 for a list of all NSW, QLD and VIC locations).
7. Enter the number of keys required and provide the Maximo Work Order number
8. Complete the Risk Identification questionnaire and answer all validation questions and upload required documents (SWMS is mandatory)
9. Read and "Accept" the ATA Agreement and Confirmation statement and select next. After accepting the Agreement and Confirmation statement the ATA request will move to 'Pending Approval' and Transurban will review your permit.

 **When arriving to site, contact the Traffic Control Room prior to the commencement of works. Contact the Traffic Control Room again when leaving site.**

**WAPs – "Work Authority Permits" is the term used in Permitted for an Authority to Access request.*

Reviews can take up to 10 business days. Editing the ATA will reset this 10-day lead time.
